

COMMPAC

Communication Systems

The Prosound range of COMMPAC communication equipment has become a standard accessory on events, in theatre and broadcasting, and on touring productions throughout the continent. Adapted to withstand harsh conditions and to meet the demands of local and international users, the COMMPAC range feature the beltpack - BP102, COMMSET I and II, the LS-1 speaker station and the PSU-1 and PSU-10 power supply units.

COMMSET I and COMMSET II

The COMMSET I and II, single and dual muff headsets are light-weight with a rugged design - purposely built for their application. These quality headsets provide maximum isolation from ambient noise.

COMMPAC BP102 Beltpack

The COMMPAC BP102 beltpack is extremely robust, easy to use and offers clear, crisp communications to all users in the loop. A total of fifteen BP102's can be looped on one communication ring powered by the PSU-15R power supply.

Loudspeaker Station LS-5

The LS-5 Speaker Station has been developed for situations where a loudspeaker and microphone would be most convenient, e.g. for sound operators, vision controllers and control rooms.

Power Supply Unit PSU-1

The PSU-1 is a heavy-duty power supply housed in a 19" 2U chassis and incorporates a built-in user station. Connections to the ring intercom system can be made at the front and rear panels of the unit. Ease of use is further enhanced by the inclusion of an additional headset socket on the rear panel.

Power Supply Unit PSU-10

The smaller PSU-10 power supply is available for portable communication systems.
