

NarratorPro

Automated Tour Narration System

The Ultimate Tour Audio System

The Easy-To-Operate NarratorPro Tour Audio System allows for each passenger in the aircraft to listen to the in-flight narration in their native language. A true plug-and-play system, the NarratorPro requires no new wiring to be run or splices to be made when using along with the Bose A20 Headset. The NarratorPro requires no pilot input thanks to its use of GPS Automation, reducing pilot workload.

Features

- ▶ Customizable Narration for Each Seat
- ▶ Support for up to 12 Languages
- ▶ User Selectable
- ▶ Playback your Soundtrack along with Narration
- ▶ Completely Automated via GPS
- ▶ Designed for Seamless Integration with the Bose A20 Aviation Headset
- ▶ Plug-and-Play Installation Requiring No New Wiring

The Future of Flight Tour Audio

Every Seat, Any Language

Each passenger can select their own preferred narrations from up to 12 languages with a dial attached to the Bose headset volume control. Each passenger will hear the prerecorded narration in their own native language in addition to standard headset audio.

Automated

Requiring no pilot input, each headset is triggered with our proven GPS automation technology. Triggering may be directed via waypoint, heading, time, or a combination of each with a 1 meter, 1 degree and 1 second accuracy.

Easy to Install

Plug-and-Play with Bose Headsets, the Narrator takes seconds to install. The system features a single base station (similar in size to a Spider Tracks), which mounts neatly on the dash and plugs into standard power connections on: Airbus, Bell and Robinson helicopters. One base station controls all headsets in the helicopter. The entire system can be installed in 20 minutes as a portable electronic device or minor alteration.
