ENGLISH   MiniMixer Audicom© Software

About Audicom: The Audicom was the world first radio automation system. It was created by Solidyne 30 years ago. See the story in **en.Wikipedia** and many other sources of Radio History. It was the first time (1989) that a PC could record and playback audio. Our invention has changed the world of music and has benefited millions of people. Today it is used in large radio stations in 50 countries in USA, Europe and Latin America and Asia being the preferred software of the leading radio stations. It is the only software on the market designed for the new generation of digital IP radios. It has connectivity to digital audio consoles IP and intelligent audio processors. That's why today is the best choice for Visual Radio (Audio + Video)

See Tutorial PowrPoint in:www.solidynepro.com/descargas/manueal_antiguos/TutorialAudicom-ENG.pdf

A- Software for the MiniMixer/A   version

The Audicom software is included in all the **/ Axx** versions and remains the property of the client without time limit. It has On-Line support for 3 months with access to your PC via the Internet (if you wish you can renew this support). The license is delivered in a USB key together with the MiniMixer.

❶ It has its own automatic music programmer *AutoDJ;* the market only that operates on-line and allows you to manage music programs at precise time (at the second) , without cutting any musical theme. It is based on 24 parameters of music such as authors, performers, musical styles, genre, etc.   See: www.solidynepro.com/software-audicom/#AutoDJ

❷ Can fully automate 24 hours, with remote operation, has our exclusive technology *CiberPLAY* the full PlayList radio that shows on-line the exact date and time of each song or commercial Ad. It allows automatic remote insertion of Interviews and Breaking News for the most vivid and dynamic radio. The time spent on these inserts is then automatically compensated; musical spaces always maintain the exact time. See: www.solidynepro.com/software-audicom/

❸ *CyberPLAY* addition: you can add windows with playlists that can be imported from other programs. It supports commercials and music tracks and you can make a quick looking of songs and effects. You can open several playlists at the same time

❹ All songs are in the *File Manager* in 10 different colors, depending on musical styles. In addition each title appears in 4 colors according to the time since the last song was airing to prevent radio DJ mistakenly repeat them.

❺ You have the most comprehensive screen keypad named **Live** *Assist;* the best of the market, oriented to new touch screen PC's. It allows assembling blocks of FX cuts or music songs for each operator or each radio program. In turn it can allow or restrict its use to other operators. Each button can be set to have hundreds of RGB colors. It supports external MIDI Launchpad's in RGB colors like MK2, AKAI, etc. The Audicom *LiveAssist* keypad have been chosen by the major broadcast and TV channels in several countries.

❻ It allows for quick editing of music and advertisings. It sends by IP RDS information when MiniMixer is used in FM radio

❼ It plays without expensive audio cards at the PC because it has digital USB connection to PC. It also has quick CUE monitoring as the PC speakers.

❽ For ease of operation the Audicom can customize the PC keyboard with optional self-adhesive keys

❾ *I-Logon* allows for different operator authorizations or prohibitions to make changes when accessing to certain programs. Thus in the case of any operation error, the radio manager will always have an internal LOG file that identifies the error and who was the operator at this moment.

❿ Audicom is the only software using the *InstantREC* recording system for immediate repetition of football match goals or any events for. For example: to extract from a long paragraph the exact phrase that defines the subject of an interviewee.

⓫ If you have Solidyne monthy support Audicom allow you to get from the nearest airport or weather station, the information about temperature, humidity, atmospheric pressure and rain. These values can be sent to the audience (even without operator) using the pre-recorded voices of the radio announcers that are included at the Audicom.

⓬ The Audicom has IP connectivity with intelligent audio processors. In this way each song can go on the air with equalization and different processing, adjusted to the type of music. Also when the microphones are On- air the audio processor change to the VOICE setting instead of music.

B—Software for the MiniMixer /AV and /AVcam

❸ Only Audicom includes FREE a 24 hours continuous logger recorder. Is the AR-200 which has an exclusive encryption system with legally validity. This way you can record all the on-air programming and defend against malicious allegations. This system, that is mandatory in many countries, is delivered in two channels at no extra charge with each license.
See details at: http://www.solidynepro.com/grabador-de-control-de-24-hs-ar200/

❹ If you have Solidyne monthy support you can remotely send at the instant News from journalists located anywhere in the world, automatically even **without operator**. You can also send automatically News from free News Agencies to RDS subcarrier to be seen on the screen of the car receivers (in FM radios). Audicom has a News Text Editor that indicates the time needed to be read it by an announcer and a Telepromter to see News on the screen. It is the only software that automatically bill the reading advertising.

❺ Audicom software has **Administration and Traffic automatic advertising batch generation**, based on the commercial files of each client or Advertising Agency. It creates a full week of advertising batches in few seconds without any single error.
❻ It includes the **ADMICON** software that is able to bill recorded Ads or even spoken by announcers Ads. It created comparative tables between scheduled commercial Ads and those who actually were aired to prevent fraud. It also identifies operators

❼ It can operate in a LAN network of several workstations for Administration, Production, Finance, etc.
Each new terminal requires a license extension of $ 250 (paid only one time for ever)

❽ Generates statistics of commercial incomes, ads batch distribution, percentage share of different customers, etc.

❾ **Automatic Podcasting On-Demand with** *AudiCAST* software module that creates and uploads at Internet a podcast t**o listen it on-demand**. Using a special code at the opening and closing presentation files of each program, no matter the time the program was recorded it is exactly cut with the full length of the program. All automatically.

❿ This MiniMixer **version includes video playback on PC screen** to be able to verify if the editing was correct and to audit if the video programming is perfectly adjusted to the audio. It has a direct output to connect to the economical CLOSE RADIOTV service that manages 4 automatic switching USB video cameras in the / AVcam model (it is manual in the / AV). The CLOSE service includes streaming to various social networks and all its listeners, as well as continuous upgrade to the latest version of video software and the use of its own servers in the USA, Canada and Germany. Also allows for on-line support 7 days a week of the video streaming using remote connection to your PC

Please see our system at work. Our software is sold in the USA with the brand AVRA
